From stars to terrestrial networks and satellites

From outdoors to indoors

From ancient to future applications

From techniques to technologies . . .

The field of radionavigation signals and systems has seen significant growth in recent years. Satellite systems are very efficient, but owing to their limited exposure and/or availability in some environments, they do not cover the whole spectrum of applications. Thus, many other positioning techniques are being developed.

Now, Global Positioning presents an overview of the strengths and weaknesses of various systems with a specific emphasis on those that are satellite-based. Beginning with a description of the evolution of positioning systems, the book provides detailed coverage of the three main Global Navigation Satellite System (GNSS) constellations, discusses how to cope with indoor positioning, defines development activities and commercial positioning, and proposes a vision for the future of the field.

Special features of the book include:

- Exercises to test and challenge the reader's understanding
- Direct comparison between constellations and other positioning systems
- Mathematical content kept to a minimum in order to maximize accessibility and readability
- Descriptions of European and U.S. discussions for Galileo
- Historical aspects and links between the distant past and current systems
- Footnotes that provide hints and comments to the reader

At a time when the positioning domain is experiencing such immense transformation, it is vital to have a solid understanding of the fundamental principles, current technologies, and future improvements that will help estimate the performance and limitations of existing systems. Global Positioning fills an important need for professionals and students in a variety of fields who want a complete and authoritative overview of global positioning techniques.

From reader reviews:

Karyn Turner:

What do you concentrate on book? It is just for students since they're still students or that for all people in the world, the actual best subject for that? Just simply you can be answered for that question above. Every person has different personality and hobby per other. Don't to be compelled someone or something that they don't desire do that. You must know how great as well as important the book Global Positioning: Technologies and Performance (Wiley Survival Guides in Engineering and Science). All type of book are you able to see on many sources. You can look for the internet methods or other social media.

John Dumas:

As people who live in often the modest era should be change about what going on or data even knowledge to make them keep up with the era which is always change and progress. Some of you maybe will certainly update themselves by studying books. It is a good choice in your case but the problems coming to you actually is you don't know what type you should start with. This Global Positioning: Technologies and Performance (Wiley Survival Guides in Engineering and Science) is our recommendation so you keep up with the world. Why, because book serves what you want and wish in this era.

Gene Taylor:

The particular book Global Positioning: Technologies and Performance (Wiley Survival Guides in Engineering and Science) has a lot of information on it. So when you check out this book you can get a lot of profit. The book was compiled by the very famous author. Tom makes some research just before write this book. This particular book very easy to read you will get the point easily after perusing this book.
