**Autonomous Learning Systems: From Data Streams to Knowledge in Real-time** Plamen Angelov

*Autonomous Learning Systems* is the result of over a decade of focused research and studies in this emerging area which spans a number of well-known and well-established disciplines that include machine learning, system identification, data mining, fuzzy logic, neural networks, neuro-fuzzy systems, control theory and pattern recognition. The evolution of these systems has been both industry-driven with an increasing demand from sectors such as defence and security, aerospace and advanced process industries, bio-medicine and intelligent transportation, as well as research-driven – there is a strong trend of innovation of all of the above well-established research disciplines that is linked to their on-line and real-time application; their adaptability and flexibility.

Providing an introduction to the key technologies, detailed technical explanations of the methodology, and an illustration of the practical relevance of the approach with a wide range of applications, this book addresses the challenges of autonomous learning systems with a systematic approach that lays the foundations for a fast growing area of research that will underpin a range of technological applications vital to both industry and society.

Key features:

- Presents the subject systematically from explaining the fundamentals to illustrating the proposed approach with numerous applications.
- Covers a wide range of applications in fields including unmanned vehicles/robotics, oil refineries, chemical industry, evolving user behaviour and activity recognition.
- Reviews traditional fields including clustering, classification, control, fault detection and anomaly detection, filtering and estimation through the prism of evolving and autonomously learning mechanisms.
- Accompanied by a website hosting additional material, including the software toolbox and lecture notes.

*Autonomous Learning Systems* provides a ‘one-stop shop’ on the subject for academics, students, researchers and practicing engineers. It is also a valuable reference for Government agencies and software developers.

### **From reader reviews:**

#### **Frank Craver:**

Why don't make it to become your habit? Right now, try to ready your time to do the important take action, like looking for your favorite guide and reading a publication. Beside you can solve your condition; you can add your knowledge by the e-book entitled Autonomous Learning Systems: From Data Streams to Knowledge in Real-time. Try to make the book Autonomous Learning Systems: From Data Streams to Knowledge in Real-time as your pal. It means that it can to become your friend when you really feel alone and beside associated with course make you smarter than before. Yeah, it is very fortunated for yourself. The book makes you far more confidence because you can know every little thing by the book. So , let me make new experience in addition to knowledge with this book.

#### **Joseph Wilson:**

This Autonomous Learning Systems: From Data Streams to Knowledge in Real-time usually are reliable for you who want to become a successful person, why. The key reason why of this Autonomous Learning Systems: From Data Streams to Knowledge in Real-time can be one of several great books you must have is giving you more than just simple studying food but feed you actually with information that might be will shock your previous knowledge. This book will be handy, you can bring it just about everywhere and whenever your conditions in e-book and printed types. Beside that this Autonomous Learning Systems: From Data Streams to Knowledge in Real-time forcing you to have an enormous of experience including rich vocabulary, giving you test of critical thinking that could it useful in your day pastime. So , let's have it and revel in reading.

#### **Megan Rivera:**

Can you one of the book lovers? If yes, do you ever feeling doubt if you find yourself in the book store? Try to pick one book that you just dont know the inside because don't judge book by its handle may doesn't work at this point is difficult job because you are scared that the inside maybe not seeing that fantastic as in the outside seem likes. Maybe you answer can be Autonomous Learning Systems: From Data Streams to Knowledge in Real-time why because the wonderful cover that make you consider in regards to the content will not disappoint a person. The inside or content is fantastic as the outside or cover. Your reading sixth sense will directly make suggestions to pick up this book.

#### **Corey Mullen:**

This Autonomous Learning Systems: From Data Streams to Knowledge in Real-time is completely new way for you who has curiosity to look for some information mainly because it relief your hunger of knowledge. Getting deeper you onto it getting knowledge more you know or you who still having tiny amount of digest in reading this Autonomous Learning Systems: From Data Streams to Knowledge in Real-time can be the light food for you because the information inside this specific book is easy to get by anyone. These books

develop itself in the form that is reachable by anyone, yes I mean in the e-book form. People who think that in reserve form make them feel drowsy even dizzy this e-book is the answer. So there is absolutely no in reading a book especially this one. You can find what you are looking for. It should be here for an individual. So , don't miss this! Just read this e-book kind for your better life and knowledge.
