Evolutionary Computation in Bioinformatics (The Morgan Kaufmann Series in Artificial Intelligence)

Evolutionary Computation in Bioinformatics (The Morgan Kaufmann Series in Artificial Intelligence)

Bioinformatics has never been as popular as it is today. The genomics revolution is generating so much data in such rapid succession that it has become difficult for biologists to decipher. In particular, there are many problems in biology that are too large to solve with standard methods. Researchers in evolutionary computation (EC) have turned their attention to these problems. They understand the power of EC to rapidly search very large and complex spaces and return reasonable solutions. While these researchers are increasingly interested in problems from the biological sciences, EC and its problem-solving capabilities are generally not yet understood or applied in the biology community.

This book offers a definitive resource to bridge the computer science and biology communities. Gary Fogel and David Corne, well-known representatives of these fields, introduce biology and bioinformatics to computer scientists, and evolutionary computation to biologists and computer scientists unfamiliar with these techniques. The fourteen chapters that follow are written by leading computer scientists and biologists who examine successful applications of evolutionary computation to various problems in the biological sciences.

* Describes applications of EC to bioinformatics in a wide variety of areas including DNA sequencing, protein folding, gene and protein classification, drug targeting, drug design, data mining of biological databases, and biodata visualization.

* Offers industrial and academic researchers in computer science, biology, and bioinformatics an important resource for applying evolutionary computation.

* Includes a detailed appendix of biological data resources.

From reader reviews:

Randy Johnson:

What do you think of book? It is just for students because they're still students or this for all people in the world, the actual best subject for that? Only you can be answered for that concern above. Every person has diverse personality and hobby for every single other. Don't to be pressured someone or something that they don't desire do that. You must know how great and also important the book Evolutionary Computation in Bioinformatics (The Morgan Kaufmann Series in Artificial Intelligence). All type of book would you see on many sources. You can look for the internet resources or other social media.

Irving Gaston:

In this 21st millennium, people become competitive in most way. By being competitive currently, people have do something to make all of them survives, being in the middle of often the crowded place and notice by means of surrounding. One thing that oftentimes many people have underestimated the idea for a while is reading. Yes, by reading a book your ability to survive increase then having chance to stand up than other is high. In your case who want to start reading a book, we give you this specific Evolutionary Computation in Bioinformatics (The Morgan Kaufmann Series in Artificial Intelligence) book as starter and daily reading publication. Why, because this book is usually more than just a book.

Douglas Henry:

Nowadays reading books become more than want or need but also turn into a life style. This reading habit give you lot of advantages. The advantages you got of course the knowledge the actual information inside the book this improve your knowledge and information. The knowledge you get based on what kind of guide you read, if you want send more knowledge just go with education and learning books but if you want truly feel happy read one having theme for entertaining for example comic or novel. Typically the Evolutionary Computation in Bioinformatics (The Morgan Kaufmann Series in Artificial Intelligence) is kind of guide which is giving the reader unpredictable experience.

Robert Eslinger:

With this era which is the greater particular person or who has ability to do something more are more treasured than other. Do you want to become one among it? It is just simple way to have that. What you need to do is just spending your time not much but quite enough to experience a look at some books. One of the books in the top checklist in your reading list is usually Evolutionary Computation in Bioinformatics (The Morgan Kaufmann Series in Artificial Intelligence). This book which is qualified as The Hungry Mountains can get you closer in growing to be precious person. By looking upwards and review this book you can get many advantages.
