**Space Electronic Reconnaissance: Localization Theories and Methods** Fucheng Guo, Yun Fan, Yiyu Zhou, Caigen Xhou, Qiang Li

*Presents the theories and applications of determining the position of an object in space through the use of satellites*

As the importance of space reconnaissance technology intensifies, more and more countries are investing money in building their own space reconnaissance satellites. Due to the secrecy and sensitivity of the operations, it is hard to find published papers and journals on the topic outside of military and governmental agencies. This book aims to fill the gap by presenting the various applications and basic principles of a very modern technology. The space electronic reconnaissance system in mono/multi-satellite platforms is a critical feature which can be used for detection, localization, tracking or identification of the various kinds of signal sources from radar, communication or navigation systems.

Localization technology in space electronic reconnaissance uses single or multiple satellite receivers which receive signals from radar, communication and navigation emitters in the ground, ocean and space to specify the location of emitter. The methods, principles and technologies of different space electronic reconnaissance localization systems are introduced in this book, as are their performances, and the various methods are explained and analysed. Digital simulations illustrate the results.

- Presents the theories and applications of determining the position of an object in space through the use of satellites
- Introduces methods, principles and technologies of localization and tracking in the space electronic reconnaissance system, the localization algorithm and error in satellite system and near space platform system, and the tracking algorithm and error in single satellite-to-satellite tracking system
- Provides the fundamentals, the mathematics, the limitations, the measurements, and systems, of localization with emphasis on defence industry applications

Highly relevant for Engineers working in avionics, radar, communication, navigation and electronic warfare.

**Chapters include:-** the introduction of space electronic reconnaissance localization technology, knowledge about the satellite orbit and basic terminology of passive localization, single satellite geolocation technology based on direction finding, three-satellite geolocation technology based on time difference of arrival (TDOA), two-satellite geolocation technology based on TDOA and frequency difference of arrival (FDOA), the single satellite localization technology based on kinematics theory, localization principles of near-space platform electronic reconnaissance systems, the orbit determination of single satellite-to-satellite tracking using bearings only(BO) information, the orbit determination of single satellite-to-satellite tracking using bearings and frequency information, the orbit determination of single satellite-to-satellite tracking using frequency only(FO) information. Each chapter ends with a problem and solution section, some using Matlab code.

### **From reader reviews:**

#### **Tony Caldwell:**

Do you have favorite book? In case you have, what is your favorite's book? E-book is very important thing for us to understand everything in the world. Each publication has different aim or goal; it means that e-book has different type. Some people feel enjoy to spend their time to read a book. They are really reading whatever they acquire because their hobby is usually reading a book. What about the person who don't like reading through a book? Sometime, individual feel need book if they found difficult problem as well as exercise. Well, probably you will require this Space Electronic Reconnaissance: Localization Theories and Methods.

#### **Bridget Dell:**

Nowadays reading books are more than want or need but also get a life style. This reading practice give you lot of advantages. Advantages you got of course the knowledge even the information inside the book this improve your knowledge and information. The knowledge you get based on what kind of guide you read, if you want attract knowledge just go with schooling books but if you want really feel happy read one along with theme for entertaining for example comic or novel. Often the Space Electronic Reconnaissance: Localization Theories and Methods is kind of reserve which is giving the reader unforeseen experience.

#### **Rick Fountain:**

A lot of people always spent their own free time to vacation or maybe go to the outside with them friends and family or their friend. Are you aware? Many a lot of people spent many people free time just watching TV, as well as playing video games all day long. If you need to try to find a new activity that's look different you can read any book. It is really fun in your case. If you enjoy the book which you read you can spent the whole day to reading a reserve. The book Space Electronic Reconnaissance: Localization Theories and Methods it doesn't matter what good to read. There are a lot of those who recommended this book. These folks were enjoying reading this book. In case you did not have enough space to develop this book you can buy the actual e-book. You can m0ore simply to read this book through your smart phone. The price is not too costly but this book possesses high quality.

#### **Charlotte Neville:**

Don't be worry should you be afraid that this book will filled the space in your house, you can have it in e-book method, more simple and reachable. This Space Electronic Reconnaissance: Localization Theories and Methods can give you a lot of pals because by you considering this one book you have point that they don't and make a person more like an interesting person. This specific book can be one of a step for you to get success. This book offer you information that might be your friend doesn't learn, by knowing more than various other make you to be great people. So , why hesitate? Let's have Space Electronic Reconnaissance: Localization Theories and Methods.
