Reproduction of Tactual Textures: Transducers, Mechanics and Signal Encoding (Springer Series on Touch and Haptic Systems) Michaël Wiertelowski

Texture accounts for an important part of the realism of simulated experiences, and it is most certainly true during tactile interaction. We usually experience roughness by running our fingers onto the explored surface. The perception of this fine texture is mediated by the vibrations generated by the encounters of the skin and the asperities of the surfaces.

Reproduction of Tactual Textures presents factors that contribute to the mechanics of the interaction between a bare finger and a surface with a view to their artificial reproduction. It discusses the recording and reproduction of tactual textures, and analyses a case study of the development of a device able to record the vibratory signal from a fingertip sliding over a textured surface. The same device is then used in a reverse way to render those previously measured signals to the user's fingertip. These developments open new questions about the biomechanical properties of the skin and their relation to perception. The second half of *Reproduction of Tactual Textures* focuses on the implication of the dynamic parameters of the skin onto rendering performance, and it concludes with a study on the important features that are present in the vibratory signal and their relation to texture perception.

This state-of-the-art volume highlights the importance of the mechanics and biomechanics during the haptic exploration of surfaces and their possible contribution to perception. Collectively, the findings reported are pertinent to many applications, including robotic perception and the design of effective virtual reality systems.

From reader reviews:

Gregory Stclair:

In this 21st centuries, people become competitive in each way. By being competitive at this point, people have do something to make these survives, being in the middle of often the crowded place and notice by means of surrounding. One thing that sometimes many people have underestimated it for a while is reading. Yeah, by reading a book your ability to survive enhance then having chance to stay than other is high. For yourself who want to start reading a new book, we give you this specific Reproduction of Tactual Textures: Transducers, Mechanics and Signal Encoding (Springer Series on Touch and Haptic Systems) book as starter and daily reading reserve. Why, because this book is usually more than just a book.

Jonathan McLean:

Do you one among people who can't read enjoyable if the sentence chained in the straightway, hold on guys this specific aren't like that. This Reproduction of Tactual Textures: Transducers, Mechanics and Signal Encoding (Springer Series on Touch and Haptic Systems) book is readable by you who hate those perfect word style. You will find the facts here are arrange for enjoyable studying experience without leaving possibly decrease the knowledge that want to offer to you. The writer associated with Reproduction of Tactual Textures: Transducers, Mechanics and Signal Encoding (Springer Series on Touch and Haptic Systems) content conveys prospect easily to understand by lots of people. The printed and e-book are not different in the articles but it just different as it. So , do you still thinking Reproduction of Tactual Textures: Transducers, Mechanics and Signal Encoding (Springer Series on Touch and Haptic Systems) is not loveable to be your top record reading book?

Timothy Bennington:

Would you one of the book lovers? If yes, do you ever feeling doubt while you are in the book store? Try and pick one book that you just dont know the inside because don't evaluate book by its handle may doesn't work this is difficult job because you are afraid that the inside maybe not seeing that fantastic as in the outside appear likes. Maybe you answer may be Reproduction of Tactual Textures: Transducers, Mechanics and Signal Encoding (Springer Series on Touch and Haptic Systems) why because the excellent cover that make you consider concerning the content will not disappoint anyone. The inside or content is fantastic as the outside as well as cover. Your reading 6th sense will directly show you to pick up this book.

John Montes:

Don't be worry for anyone who is afraid that this book may filled the space in your house, you could have it in e-book means, more simple and reachable. That Reproduction of Tactual Textures: Transducers, Mechanics and Signal Encoding (Springer Series on Touch and Haptic Systems) can give you a lot of pals because by you taking a look at this one book you have matter that they don't and make a person more like an interesting person. This particular book can be one of one step for you to get success. This book offer you

information that possibly your friend doesn't know, by knowing more than different make you to be great persons. So , why hesitate? We should have [Reproduction of Tactual Textures: Transducers, Mechanics and Signal Encoding \(Springer Series on Touch and Haptic Systems\)](#).
